

How to clean the build plate

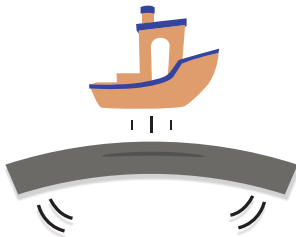

1

Let it cool down

Wait until the build plate has cooled. It can be hot enough to burn you.

2

Take your print off

Lift the plate off the printer and flex it gently to free the print. Never scrape it with a knife.

3

Wipe it clean

Wipe the plate with isopropyl alcohol and a lint-free cloth. Hold it by the edges: fingerprints stop prints from sticking.

4

Put it back

Lay the plate back on the printer, lined up and flat, so the next print can start.
